DK7797-3 Screw Thread Injector

**DK7797-3**  Screw Thread Injector

- Suitable for Alcon MONARCH® IID, IIC and IIB cartridges
- Front loading cartridge, secured by rotating sleeve
- Screw thread delivery for efficient lens implantation
- Rapid screw thread gives a smooth predictable lens delivery
- Injector separates to expose internal parts for cleaning
- Injector length (without cartridge) 152mm

The thread engages at the IOL pre-load position, reducing the screw movement for the surgeon during final delivery. To ensure a successful IOL delivery and implantation, correct loading and setting of the IOL into the cartridge is essential. Duckworth & Kent always recommends using the Loading Forceps (DK7717) which feature highly polished surfaces for easier loading without damage to the IOL. The forceps correctly load the IOL into the cartridge in a pre-load position.

*Duckworth & Kent does not supply the Alcon Monarch cartridges or Alcon IOL’s*

---

**DK7717**  Lens Loading Forceps

- For loading AcrySof IOL into the MONARCH II and III cartridges
- Highly polished tips protect from scratching the lens surface
- 8mm diameter round handle, length 122mm

The DK7717 Lens Loading Forceps are used to load the IOL into the cartridge. To ensure a successful IOL delivery and implantation, proper loading of the IOL into the cartridge is essential.
Loading Monarch Cartridge using DK7717 Forceps

The forceps (DK7717) gently grip the trailing haptic whilst the ‘V’ notch supports the optic. Place the IOL into a cartridge that has been coated internally with visco elastic. Using the upper thin limb of the forceps, gently push the optic down onto the base of the cartridge.

Fold the trailing haptic over the top of the optic and into the cartridge using the ‘V’ notch of the forceps. With the forceps closed, the step in the lower limb pushes the IOL into the cartridge. The top of the step keeps the optic on the base of the cartridge.

Push the IOL until the forceps shoulder reaches the back of the cartridge. The IOL is now in the ‘pre-load’ position. Gently remove the forceps out of the cartridge, and then load the cartridge into the injector.

Push the DK7797-3 screw thread injector plunger until it engages with the first thread and stop. The injector is ready for IOL delivery.
